PROJECTS

BoxBox

Nov. 2025 – Present

Self-hosted file management system for Linux servers | [Website](#) | [GitHub](#)

- Built a **lightweight** self-hosted file manager in **Svelte + Go** with multi-mount browsing, chunked transfers, real-time updates, media preview/stream/download support, and **Monaco Editor** integration.
- Shipped production deployments as a **31MB single Go binary** with an embedded Svelte frontend and Docker-based setup.
- Grew the project to **200+ GitHub stars** and **3K+ downloads**.

HPOMen Linux (Victus Control)

Mar. 2026 – Present

Reverse-engineering HP OMEN/Victus control utility behavior on Linux | [GitHub](#) | [AUR](#)

- Developing a Linux-first OMEN/Victus control suite in **Vala** with a GTK4 monitor app, tray companion, D-Bus helper, and probe CLI.
- Reverse-engineered **HP WMI/sysfs** behavior to validate profile/fan controls (**auto/max**) and extend **hp-wmi** with capability-gated safety fallbacks.
- Submitted a Linux kernel **hp-wmi** patch accepted into **platform-driver-x86**, adding Victus 15-fb0xxx board support for fan-control feature data; also provided **Tested-by** validation for another **hp-wmi** fan-control patch on real hardware.

U-Net Audio Filter

Jul. 2025 – Present

Audio enhancement by removing background noise | [GitHub](#)

- Building an audio enhancement system with a **custom U-Net-inspired architecture** and end-to-end audio denoising pipeline.
- Implemented **Python/PyTorch + audio DSP** preprocessing, spectrogram modeling, and evaluation tooling, with early results showing minor gains over open-source baselines.

Fast Blob Storage (FBS)

Apr. 2026 – May 2026

S3-compatible blob storage and CDN solution primarily for self-hosting | [Live](#) | [GitHub](#) | [Docker](#)

- Built a single-binary **Go** storage backend with **SQLite** metadata, decoupled **SvelteKit** dashboard, and a published Docker image.
- Reached **50+ GitHub stars** while supporting self-hosted S3-compatible object storage and CDN workflows.
- Supported Both SigV4 and bearer token authentication, using linux **sendfile()** for efficient zero-copy file transfers.
- Achieved binary sizes of **15MB** and idle RSS of **16MB** and under load RSS of **21MB** in controlled benchmarks, making it suitable for self-hosting on resource-constrained environments.
